

Floor Solutions

Stonhard Provides Merck a High-Performance, Aesthetic Flooring Solution for its Pharmaceutical Production Plant

Leading science and technology company relies on Stonhard for high-performance flooring solutions

Products used at Merck, Mollet del Valles:
Stonblend® GSI

Merck, a leading science and technology company that specializes in healthcare, life science, and performance materials, operates in 66 countries around the world and employs more than 57,000 people. Two Merck production facilities (pharmaceutical and chemical) are located in the Barcelona area of Mollet del Valles.

Stonhard, with many decades of experience in providing a variety of floor and wall solutions for the pharmaceutical industry, was brought into the Merck Mollet del Valles plant where the global company manufactures more than 400 different pharmaceutical products and has the production capacity of two billion pharmaceutical doses. The plant's production areas and clean rooms were in need of restoration as the epoxy floors were worn and yellowed. Merck desired a terrazzo-like look that would have a minimal number of joints with a high-quality finish. Stonhard's Stonblend

The Stonhard Difference
Stonhard is the unprecedented world leader in manufacturing and installing high-performance polymer floor, wall and lining systems. Stonhard maintains 300 Territory Managers and 175 application crews worldwide who will work with you on design specification, project management, final walk through and service after the sale. Stonhard's single-source warranty covers both products and installation.

GSI flooring system was the perfect fit to meet both performance and design. This decorative epoxy flooring system is a cost-effective alternative to terrazzo that offers long-lasting durability as well as stain, chemical, and slip resistance.
